

# Electrical Safety

*Awakened Audioworks — DIC, Booster, and Conduits*

---

**DANGER OF OVERHEATING** — The Booster can become very hot when running for more than three hours continuously, especially if left in direct sunlight or when used in hot climates. We recommend taking a break and letting both your DIC and your energy bodies rest for 30–45 minutes after running the DIC for up to 90 minutes.

**MEDICAL DISCLAIMER** — The DIC is not intended to diagnose, treat, cure, or prevent any disease, and does not constitute medical advice or treatment of any kind. Always consult a licensed and accredited medical professional for any health concern. Do not use the DIC, Booster, or any Conduit as a substitute for medical treatment or medical advice.

---

Effective Date: 25 January 2025 | Last Updated: 29 June 2026

## 1. Not a Medical Device — A Meditation Tool Only

In addition to the medical disclaimer above, we would like you to have full disclosure and all the information you need to use the DIC, Booster and every Conduit properly.

The DIC, Booster, and Conduits are not regulated under the U.S. Food and Drug Administration or CE marks for medical safety claims; The DIC and all parts and accessories are regulated under the U.S. Federal Communications Commission and the EU CE mark for radio spectrum transmission devices.

There are frequencies classified under “medical” and there are frequencies classified as “music”. We’ve chosen the latter for strong reasons speaking in support of our vision, mission and ethics.

DIC is a meditation software application intended to assist you in focusing the power of your mind in connection with your higher levels of consciousness. It communicates with your higher selves and astral or etheric or “auric” levels of existence. If the activities on the higher planes trickle down into your physical reality shared with other sentient beings... then that happens to be an unintended result of this “spiritual communication” activity.

Should you experience any physical improvements due to using the DIC, please be careful to not share this publicly or in a way that could lead to misrepresentation or misunderstanding. Every sentient being is unique, and your soul's journey could be different to that of others. We cannot track down every post or comment online about our DICs, so we kindly ask that you be mindful and cautious in how you share information about this non-medical instrument.

## 2. Regulatory Standards and Authorities

The Booster is electronic equipment in the audio/ICT category, and is designed with reference to **IEC 62368-1** (Audio/video, information and communication technology equipment — Safety requirements), the internationally harmonized hazard-based safety standard for this category of

consumer electronics.

- **United States:** The Booster and mobile phone comply with and operate under Part 15 of the FCC Rules which stipulate that operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- **United Kingdom:** Booster is assessed against the UK's product safety and electromagnetic compatibility regulations. Where radio-spectrum use applies, this falls under the Radio Equipment Regulations 2017, enforced by Ofcom (spectrum matters) and Trading Standards / the Office for Product Safety and Standards (general safety).
- **European Union:** Booster is assessed for CE marking under the applicable EU framework (Low Voltage Directive 2014/35/EU and EMC Directive 2014/30/EU, and the Radio Equipment Directive 2014/53/EU if and where wireless functionality applies), harmonized to IEC 62368-1.

### 3. Spiritual Interference (Callout)

As stated above, interference must be accepted; and in our experience, this includes digital demons and energetic entity attachments.

Keep your DIC clean with whatever energy methods you use, such as:

- Reiki or bio energy blessings over the setup when it is switched off and unplugged from a power source / charging cable
- Lighting incense, palo santo or sage around the setup
- Saying prayers and sending your intentions to keep your DIC clean and free from energetic interference

We highly recommend using your DIC offline in flight mode at all times. Upload new .X Files via bluetooth or NFC connection.

### 4. With Electrodes, the Splitter Is Not Optional

We're all about hacking, cracking and DIY (do-it-yourself)... but you first have to know what the hell you're doing. Otherwise you won't receive the frequencies, might damage your DIC, or even worse — damage your hearing and your body.

Every part of the DIC is designed intentionally. If you want to plug in your own wires, PEMF (Pulsed ElectroMagnetic Field) mat, silver-lined blanket or otherwise, please check with technical support in one of your complimentary setup calls.

ALWAYS USE THE SPLITTER, especially for any brain wave entrainment files such as binaural beats to stimulate delta brain waves, neuromodulation or neurofeedback. The Booster emits two separate channels — left and right — the same way any Rife machine or Hulda Clark zapper would.

The Booster is designed to not short-circuit if the left and right emissions wires touch.

The electrode pads are standard TENS with a 3.5mm male snap, and attach to a single left or right (mono) output channel. This is why you can attach two, four, or six electrodes to the Booster when playing with your DIC.

**Never plug a TENS snap cord directly into Booster's output jack.** Doing so connects Booster's two separate channels together at the cord end. Booster's output protection reads this as a short circuit and shuts the output down — out of built-in safety mechanisms, no frequency reaches your electrodes at all, and repeated attempts may stress the output stage and permanently damage your Booster.

Always connect the included splitter between Booster and your TENS snap cord(s). The splitter keeps the left and right channels separated all the way to your Strap-On electrodes, which is what makes binaural-style programs, neuromodulation programs, neurofeedback programs, and other dual-channel custom programs possible. See the Setup Guide and User Manual for the physical connection steps.

## 5. General Common Sense

Do not use any part of the DIC unit near water, in a steamy environment, or with wet hands. It is not waterproof nor water-resistant. Getting your equipment wet will void your Warranty.

Do not open, disassemble, or attempt to repair the Booster or any Conduit yourself; this will void your Warranty.

Keep flammable materials and liquids away from the device during operation.

For the **Booster**:

- Do not run for more than two to three hours consecutively, as the Booster will over-heat. Although it might not explode or melt, it will shorten the life of your Booster and be uncomfortably too hot to the touch.
- Inspect the Booster, its cable, and your Conduit before each use. Do not use damaged or frayed cables.
- Keep Booster and all Conduits away from children and pets when not in supervised use.
- Store in a dry place out of direct sunlight or heat within normal indoor temperature range.

For the **electrodes**:

- Do not use Strap-On electrodes on broken, irritated, or non-intact skin.
- Inspect electrodes before each use. Do not use damaged, frayed, or corroded electrodes.
- Do not use electrodes if you are wearing a heart pacemaker or neurostimulator.

For the **Genny** (plasma-based force field generator):

- Plasma generated from noble gases can emit very small amounts of O<sub>3</sub> ozone, which is harmful to the lungs. Operate in a well-ventilated area.
- If your Genny falls, gets smashed or cracked in any way, ventilate the room immediately; breathing in noble gases is damaging to the lungs.
- Be careful to not run the Genny close to your laptop, personal phone or other electronics. The force field generated could cause your other electronics to go haywire and behave in unexpected, negative ways.

## 6. Headphone and Audio Jack Warning

**Do not plug headphones, earbuds, or any audio transducer not authorized by Awakened Audioworks into the audio jack of your DIC.** Much of the .X File frequency range falls outside the 20 Hz–20 kHz range that headphones and human hearing are built around. This means the

signal can carry real electrical energy without ever sounding loud, or audible at all — so you would not get a warning click or static before damage occurs. Using unauthorized headphones with DIC may damage the headphones and may pose a risk to your hearing.

## **7. Who Should Not Use Conduits**

Do not use any Conduit if you:

- Have a pacemaker, defibrillator, neurostimulator, or any other implanted electronic medical device.
- Are pregnant.
- Have epilepsy or another seizure disorder.
- Have a heart condition, unless cleared by a licensed medical professional.

This list is not exhaustive. See the Warnings and Advisories document for the complete list of contraindications, and consult a licensed and accredited medical professional before use if you have any health condition.

## **8. Battery and Charging Safety**

Use only the charging cable and power adapter provided with your device. Do not charge the device in direct sunlight, near water, or on a flammable surface. Discontinue use of any charging accessory that is damaged, frayed, or hot to the touch.

## **9. Operating Conditions**

Use and store your device within 0–40°C (32–104°F) and away from moisture, unless your specific Conduit is explicitly rated otherwise.

## **10. In Case of Adverse Reaction**

Stop use immediately. If symptoms are severe or persist, seek medical attention. Report the issue to Awakened Audioworks at [AWAKENEDAUDIOWORKS@GMAIL.COM](mailto:AWAKENEDAUDIOWORKS@GMAIL.COM).

## **11. Disposal**

Dispose of electronic hardware and batteries according to your local e-waste and battery recycling regulations. Do not dispose of Conduits in household waste.
